

Imagine buying a home without cable, without a dishwasher, or without central air. Someday it will be just as unimaginable to buy a home without a home network system. To make full use of electronic capabilities that are increasingly part of our lives, you need a system that can handle it with ease. Installing these systems today means your home can be marketable for the future.

Pruitt Electric is now an OnQ Legrand installer. This means the great benefits of a truly smart home are now available to you, our valued customer. Contact us today to take full advantage of this promising new service.

Simply put, OnQ is the networking system for today and tomorrow-the networking system for the electronic home. Pruitt Electric uses high-performance cables and OnQ components that can handle all your electronic needs from TV to Internet access, from security to home automation.

Enjoy television and music your way, anywhere in your home. Whether you have cable or digital satellite, surround sound or basic TV speakers; your Pruitt Electric system allows a video and audio outlet in every room. From the home theater in your family room to a TV in the bedroom, Pruitt Electric makes it easy to distribute audio and video throughout the house.

Want to use a video camera to monitor the baby's room? You can tune into the camera from any TV in the house. Add a camera to the front door and see who's there.

Work at home with the same convenience you have at the office. With Pruitt Electric and OnQ, you're wired for work too. Plug in your computer, fax machine, modem, and telephone, and you're connected to the world. Create an in-home local area network, linking computers and their peripherals together so their capabilities can be shared.

Because technology changes rapidly, you need a wiring system designed to handle whatever you desire. You need a system that won't become obsolete because it can't handle the new technologies like digital television, high-speed Internet access, or video-on-demand.

The Pruitt Electric system uses wiring that surpasses the needs of today so you're ready for the technology of tomorrow.
